

For a complete backup solution that delivers:

Peace-of-mind – your business critical data is protected day-in and day-out

Freedom – your staff can focus on what they do best, rather than administrating backup

Speed – rapid recovery of single files or complete systems

Security – a single solution that ensures your important data is held securely off-site

Professional service – highly experienced, proven delivery for businesses of all sizes

Round the clock – 24x7x365 UK-based support desks

All data remains in the UK – we do not transmit your data overseas.

SmartGUARD

SmartGuard from LeadingEdge is a premier online backup service that you can depend on to deliver daily protection for your business critical data and disaster recovery as part of your business continuity plan.

Our managed service automates your daily on-site backup, and transmits important data securely over the internet to our professional data centre. The advantages of SmartGuard over traditional on-site backup solutions include:

- Easier – backups are fully automated to occur regularly and reliably
- Efficient – free staff from backup headaches, and remove the need to purchase additional hardware or software
- Cost-effective - SmartGuard is delivered with a predictable monthly operational cost
- More flexible – with just a call you can grow or shrink the level of service
- Safer – data is secured off-site, away from viruses, hackers, fire or flood
- More privacy – all data is encrypted at source and transmitted securely off-site
- Faster to restore – restoring files or entire systems is straightforward and incredibly fast.

SmartGuard is designed to be effective at protecting your data, and simple for you to use. LeadingEdge provides a fully managed service that includes daily checking of your backup and your data to ensure that processes are happening day-in and day-out just as they should.

With SmartGuard, you can be confident in backup and disaster recovery. With LeadingEdge, we'll focus on your data protection so you don't have to.

Our SmartGuard online backup solution provides an easy and an instant way to restore critical data in the event of hard drive crashes, power surges, dropped or stolen laptops, accidental deletes, and natural disasters and also offers the advantage of securely storing files and the flexibility of restoring them whenever needed.

Features	Benefits
Complete online back up and instant restore	Backup of live systems, applications, configurations and their settings with instant bare-metal and virtual restore capabilities.
Disaster recovery: Near continuous data protection	Minimize data loss and backup window with near continuous online backup services.
Server backup and recovery: disk imaging and bare metal restore technologies	Restore in minutes the contents of entire hard drive, including the operating system, network, system settings, applications and data.
Remote backup and disaster recovery	Cost-effective remote backup and recovery solution to protect both physical and virtual environments.

We're very confident in our solution, so much so that we happily offer a 30-day trial where you can run the service, test it and make sure it fits your needs. And if it doesn't, there's no strings attached – we will simply remove your data from our platforms and return it to you.
